

Rail Freight and Mass Transit

World of Experience

Accurate, Real-time Data for Better Utilization and Efficiency

TransCore's Automatic Equipment Identification (AEI) solutions use Radio Frequency Identification (RFID) technology to increase equipment utilization, and reduce re-handles, dwell times, and overhead.

Mass transit rail agencies use TransCore systems for automatic train positioning, condition-based monitoring, and fault detection. Reliable, accurate data reduces operating costs and improves passenger safety.

Applications:

Automatic Equipment Identification

Railcar and equipment tracking · Yard management/
equipment inventory control · Gate access control · Fuel
terminal authorization

Automatic Equipment Monitoring

Locomotive, generator, or refrigerator fuel level assessment
Cushioning device monitoring · Moisture and lead detection
Temperature monitoring

Automatic Train Positioning

Identifies train location · Monitors train speed · Controls
arrival and departure information · Controls onboard
announcements

Benefits:

- ▶ Improves asset tracking, management, and utilization
- ▶ Reduces operating costs
- ▶ Facilitates real-time reporting
- ▶ Eliminates costly human errors
- ▶ Improves safety
- ▶ Enhances reliability

TRANSCORE
Trusted Transportation Solutions

TransCore is the only company to meet AEI industry standards worldwide.
